PROCEDURE

SOP 01 — Client Work Pipeline & Workflow

How every client project is timed, communicated, quality-checked, and delivered.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 05 (Filing & Delivery) and SOP 06 (Client Onboarding & Off-boarding).
This document connects directly to both.

1. Project Timelines & The Buffer System

Every client project runs on a mandatory **dual-layer buffer**. The client sees one date; the team works to an earlier date; management protects an even earlier failsafe.

CLIENT SEES THIS DATE

+30% TEAM BUFFER

+30% MGMT FAILSAFE

The real internal target is far earlier than the client's deadline. This is by design.

The Buffer Approval Chain

- 1 **Implementers** give a realistic time estimate.
- 2 **Direct Manager** (e.g., Sama) reviews and recommends the timeline.
- 3 Add **+30% team-visible buffer**, then **+30% private management buffer**.

- 4 **Head of Operations (Biker)** approves. He and the recommending managers now jointly own delivery.

RED LINE — Miscalculations are NOT the client's problem. If a timeline is miscalculated, we do **not** ask the client for an extension. It is absorbed internally, including all-nighters under the Head of Operations.

2. Delivery Zones & Consequences

ORANGE

Inside the team-visible buffer.
Prioritize and push to finish.

RED

Team deadline failed, still inside the private buffer. Client not yet impacted.

BLACK

The actual client deadline is breached. Maximum severity.

Zone	Meaning	Consequence
Orange	Entered internal buffer	Prioritize completion immediately
Red	Internal deadline missed	4 strikes = immediate no-notice termination
Black	Client deadline breached	All monthly KPIs wiped + 10% base deduction. 2nd offense = no-notice termination. Exceptions need pre-approval from Nabil AND Omar.

Ticketing & Approvals: All requests, issues, and holidays go through the centralized Slack ticketing system. Time-off requires dual approval from **both Nabil and Omar**.

3. Communication Protocols

ZERO unrecorded calls — no exceptions. Every call (client, team, management, owners) is recorded, documented, and centralized, with a copy accessible to top management at all times.

Centralized Communication & The Private Communication Rule

All work communication happens on designated, centralized Slack channels. Private, hidden, or cluttered direct messages for work matters are prohibited. We are migrating off WhatsApp internally.

3-REPORT RULE = IMMEDIATE TERMINATION. Any private communication involving work, clients, or anything not strictly personal, that is detected and reported **3 times** by any individual, constitutes grounds for immediate termination.

ZERO-TOLERANCE CLAUSE — NO SECOND CHANCES. If any off-record work communication causes real wastage of time, finances, damage to our image, or harm to client delivery success in any way, there are **no second chances** — immediate termination, regardless of report count.

The Iklipse Bot & Channel Mediation

Clients default to Slack. If a client insists on WhatsApp, they join a group where the **Iklipse bot** centralizes everything, mediating WhatsApp ↔ Slack so the team works only inside Slack. Email is reserved for formal milestones and legal matters (SOP 06).

Client Communication Tiers (brackets shown openly)

Tier	Definition	Financial Bracket	Response SLA	Handled By
Tier 1	TVC, major brands & agencies (Imperial, Hardee's, McDonald's, VML Egypt, BPG Dubai)	Highest-value strategic	Max 1 hour (working hours)	Head of Operations (Omar) only
Tier 2	Medium clients/projects	\$5,000 – \$10,000	A few hours; ask urgency first	Sama & assistants
Tier 3	Smaller clients/projects	Below \$5,000	Automated, less rigid nudging	Sama & assistants

Retainer Class	Definition	Priority
Class A	Lifetime value above \$35,000, or monthly retainer above €4,000	High care
Class B	Below the Class A thresholds	Standard

Availability & Escalation Fallback

When a handler is on a call or unresponsive, an automated, context-aware reply acknowledges the client, reads the handler's calendar to give an exact time-to-availability, and asks if it is urgent. If urgent, it escalates (assistant → Account Director), books a calendar task with the request in the notes, and sends private nudges. Unanswered after 2 hours, it intensifies across channels and

finally triggers an automated voice dial in a fixed order (full ladder in the Escalation & Failsafe Protocol).

 **Universal fail-safe:** If a project manager is unavailable, responsibility **immediately falls on the implementer**, who acts on the documented protocol rather than waiting.

4. Quality Control, Delivery Format & Presentation

 **RED LINE — NEVER deliver text-only in a visual project.** No deliverable in a visual project may be handed over as text-only, Word-only, or Excel-only. Every visual milestone is paired with a real visual presentation. Never rely on the client to imagine the outcome.

Mandatory Pairings

Content Plans Excel / sheet	+	Always Polished presentation — every single time
Narrative / Video Ideas Text	+	Always Base visual moodboard (a real curated asset — NOT a Pinterest link)
Any Client Milestone If not strictly technical strategy, and it could feed a later visual stage...	→	Must be visualized Never rely on the client's attention to text detail or their own interpretation

 **Inter-Milestone AI Checklist:** Before moving between any two milestones, an AI step generates a checklist of clarifying questions to ask the client, mitigating surprises of all kinds (detailed in the automation spec).

Delivery Mechanisms (restated — non-negotiable)

Mechanism	Rule
WeTransfer	Every final delivery, in all cases, is a WeTransfer link. No chat file attachments for final delivery.
Multi-channel	Sent via email (formal record) AND posted in the client's chat (Slack, or WhatsApp for fallback clients).

Off-boarding Email	Branded to match the Onboarding Email; includes a review request. See SOP 05 & SOP 06.
---------------------------	--

Presentation Standards & The 1% Doubt Rule

Standard	Rule
Format	Polished, highly visual PDF presentation
Exception	Canva / Google Slides only when a video must be embedded
1% Doubt Rule	Even 1% doubt about quality or accuracy → escalate to Nabil for QC before sending
