

IKLIPSE RESET · STANDARD OPERATING PROCEDURE

SOP 02 — Iklipse Social Media

Strategy, cadence, quality control, engagement, and growth for Iklipse's own presence.

TIER 1 · EMPLOYEE-FACING

1. Content Strategy & Volume

To protect quality and consistency, Iklipse's own content volume is being structurally reduced by roughly **30–35%** from previous targets. This is the governing principle; exact counts are set per active task.

Less volume, higher quality. Fewer pieces, delivered consistently and on time, beats high volume delivered late.

Worked example — the current active task. The standing task was **110–120 posts by end of July** (20 videos, the rest carousels). After a further reduction to protect quality, the final target is set below. This is a task-specific update logged in the Active Task Updates document; the SOP itself fixes only the *principle*.

Format	Original (by end of July)	Final Reduced Target
Videos	20	6
Carousels	90–100	55
Total pieces	110–120	61

2. Posting Cadence & Timing

Frequency shifts from **daily** to **every two days**. The exact monthly rhythm is **dynamic** — alternated according to that month's instruction.

Posts always go out **between 5:00 and 8:00 PM Cyprus time**, regardless of the monthly plan.

Maximum **2 skips per month**. If you skip, the post goes out the very next day.

RED LINE — **never exceed a 2-day gap**. A gap of more than two days between posts is strictly prohibited under any circumstances.

Format Weighting

Short Video

Weight 1

Long Video

Weight 1

Carousel

Weight 2

3. Captions

Rule	Detail
No em dashes	Em dashes are never used in captions.
Must not read as AI	Captions are reviewed to ensure they do not sound, look, or feel AI-generated — natural, human, on-brand voice only.
Approval	Every caption is approved by Sama (Account Director) before posting.

4. Carousel Quality Control — 3 Eyes Before, 3 Eyes After

Every carousel is checked thoroughly by at least three people BEFORE posting, then re-checked by three again AFTER posting.

What to check for — Multi-Criteria Review

Social content is never reviewed on visuals alone. Every reviewer evaluates the piece across **all** of the following dimensions before it is approved:

SOCIAL SAVVINESS

Does it feel native and smart for the platform? Reads like a social-first creator made it, not a brand broadcasting.

VIRALITY POTENTIAL

Strong hook, shareability, save/comment triggers. Is there a real reason this travels?

ON-BRAND

True to Iklipse's voice, palette, and positioning. Branding visible and consistent.

AI QC

Deformities, logical errors, contrast issues, AI artifacts — fingers, eyes, shoes, text, edges, and any fine detail in AI visuals.

CAPTION

Hook, clarity, on-brand human voice, no em dashes, must not read as AI (see Section 3).

GRID COHERENCE

The post sits well within the overall grid — colour, rhythm, and composition stay coherent across the feed.

CHARACTER CONSISTENCY

Any recurring character/persona looks **consistent** across frames and posts — same face, features, styling, and proportions. No drift between slides or episodes.

TEXT / LANGUAGE

Spelling, grammar, and linguistic errors in any copy or on-screen text.

This list is a minimum, not a ceiling — reviewers flag anything else that weakens the piece.

Required reviewers (pre-post)

- 1 **Kotb** — the person handling social media posting (mandatory).
- 2 **Sama** — Account Director (mandatory).
- 3 The **implementer** who produced the work — designer, Head of Design, video editor, or AI specialist (mandatory additional layer).
- + **Shams** — Sama's second-in-line (suggested).

5. Mandatory Team Engagement

The entire team is obligated on every post to: **react, comment, share, and save**. Adding the post to a personal story is an encouraged courtesy; everything else is obligatory.

6. Daily Comment & Message Monitoring

To stop missed comments and messages — a recurring problem, **especially on Threads** — two named individuals check **all platforms every day** as a mandatory daily checklist item.

- 1 **Person 1: Kotb** (the social media specialist posting).
- 2 **Person 2: Sama**. This pairing is decided once, documented, and never changed again.

Twice-Weekly Deep Audit — Shams (under Sama's management)

 **Every Monday and Thursday**, Shams goes through our posts **post by post**, manually and carefully, to catch what slipped through every prior layer:

Audit focus	Detail
Language & grammar	Any grammar, language, or copy issues in captions or posts — even after all earlier checking layers.
Missed comments & messages	Hunt for missed comments and messages, specifically attempting to find Instagram message gaps .

Platform Response Protocols

Platform	Response Window	Sign-off
LinkedIn (Nabil's profile)	Within 3 hours , Monday–Friday, during Sameh's dynamic working hours	Sameh
Instagram	Daily 12:00–12:00 , in a maximum of 2-hour intervals	Kotb

 **Backup coverage:** as standard procedure and fallback, at least **two additional people** are trained regularly on handling message responses.

Response Tone & Emoji Guide

 **Avoid short, lame, boring, cold, or blunt responses.** Always be excited, inviting, confident but warm.

Use at least one emoji to imply friendliness every few messages, starting with the very first message. Context-appropriate options:

Emoji	Implies
👁️ (eyes)	Curiosity
👤 (halo)	Humility
🕶️ (sunglasses)	Confidence
🙏 (praying hands)	Gratitude
😊 (subtle smile)	Elegant politeness

 **Spam-filter caveat:** Platform automations may not trigger with surgical accuracy every time. If replying to specific comments would risk tripping a spam filter and incurring penalties, we may intentionally **not** respond to those comments to protect the account.

7. Stories

- 2 A minimum of **two stories per day**, at least **one of them interactive**.
-  On any posting day, the item posted is also pushed to the story (in addition to the two daily stories).

8. Monthly "Flex" Content

 **At least 4 pieces per month** revolve entirely around our achievements and projects worth showcasing. If nothing new is available, compile and consolidate existing work into a **micro-showreel**. Feature relevant clients, tag them, and use it as a hook to attempt a collaboration.

9. Collaborations & Vendors

Optimum target: **at least one collaboration per week**. When in doubt, fall back to recurring collaborators — but proactive outreach is the standing task.

Item	Rule
Owners	Account Director, the social specialist handling the account, or Shams (coordinating alongside Sama)

Documented effort	Owners must show clear, documented outreach to multiple AI creators and others whose work we praise, to build rapport and propose collaborations
Selection criteria	Built on valid, viable reasons: niche fit, correlating virality potential, and coherent/overlapping target audiences

Approval gate: Collaboration selections are **run by Nabil** (this is not a final-approval requirement). Final approval may come from **either Nabil or Biker** — but a collaboration post is **never published unless one of the two partners has approved it.**

10. Platform Expansion (Active Task — by end of July)

Immediate expansion to at least two more platforms by end of July. We already cross-post on **Threads and LinkedIn**. Suggested new platforms: **YouTube and TikTok** for alternative short-form reach. TikTok now supports carousels, making it doubly viable.

11. LinkedIn & Employee Branding

Reposting Instagram content to LinkedIn is fine. The key is to **also** produce some **bespoke, LinkedIn-relevant** content that suits the platform's professional context — not to rely on reposts alone.

Mix: Instagram reposts are welcome, but layer in LinkedIn-specific pieces (employee branding, hires, achievements, event repurposing, industry commentary) that would not normally appear on Instagram.

Content Source	What to Post
Employee Branding	Celebrating a new specialist hire, an individual employee achievement, or a collective achievement (most typical to LinkedIn)
Doers Summit	Repurpose and organize the Doers content, posted periodically until all content is exhausted
Industry Authority	Relevant AI news and its impact on marketing & branding

Profiles: Posted on the **Iklipse profile**, and — specifically for the Doers context — on **Nabil Khaled's personal profile**. Owners: Sama and Kotb.

12. Content Development Process

AI Inspiration group: visibly implement ideas drawn from our dedicated "AI Inspiration" group on Instagram. **Note:** for the imminent **June and July 2026** batches, Nabil provides the briefs directly.

Each content batch follows these steps in order:

- 1 Scroll through saved content and the feed on the actual Iklipse Instagram. **This is active research, not passive scrolling** — study high-performing posts to reverse-engineer fascinating storytelling and algorithm-appeasing tricks (hook pacing, retention loops, pattern interrupts), e.g. the post at [instagram.com/p/DZS0xNBk9uS/](https://www.instagram.com/p/DZS0xNBk9uS/). Save standout examples to the reference sheet.
- 2 Document **5 content pillars** per batch.
- 3 Decide direction via those pillars (e.g., prompt posts, tool workflows, AI news, flexing impressive AI aesthetics, calling out failures, reaction posts).
- 4 Develop a coherent reference and **moodboard on Miro** — saved and accessible for future use.
- 5 Develop or reuse a **skeletal prompt framework**: the content creator inputs the data, ideas, concepts, and hook reference sheet, then polishes the skeleton for the ongoing batch (assuming a carousel focus).
- 6 Write the content following the agreed skeletal structure.

Skeletal Hook Structure (example)

Hook → **Promise hook** → **Meat / value / entertainment** → **Milestone pause** → **More meat** → **CTA**. The CTA does not always have to land on the final slide.

Cadence Rules

Rule	Detail
Freebie / Manychat posts	At least once a week , a post tied to a freebie and connected to a bespoke Manychat flow for that corresponding post.

Prompt posts

No more than 3 per month, at a posting rate of 15 posts per month.

[VERIFY] Reconcile cadence: steady-state ≈ 15 posts/month (with prompt posts ≤3/month) vs. the June–July batch target of 61 pieces (6 videos + 55 carousels). Working assumption: 61 is the two-month push total; ~15/month is the ongoing steady state thereafter.

13. Future Direction: Funnels & Media Buying

Forward-looking (not yet active): the above assumes no highly specific marketing funnel is in place. As Iklipse transitions to more strategic, intentional posting, plan for:

Funnel Stage	Intent
Top of funnel	Broad reach and awareness content.
Mid funnel	Consideration, nurturing, demonstrating capability.
Bottom of funnel	Conversion-focused content and offers.

Integrate **media buying** here — potentially setting up ads for a **webinar** and building a dedicated funnel around it. (To be expanded in the marketing/BD strategy.)
