

IKLIPSE RESET · STANDARD OPERATING
PROCEDURE

SOP 09 — Quality Control (The Overarching QC Gate)

The single, non-negotiable quality gate that sits above every kind of work we produce.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 01 (delivery, the 1% Doubt Rule, template approval chain), SOP 02 (social QC & the defect checklist), SOP 05 (filing & delivery). This SOP **overarches all of them** — it applies to every output regardless of medium.

1. Scope — What This QC Gate Covers

This QC gate is **medium-agnostic**. It applies to all of our work without exception: static design, video, AI-generated visuals, content plans, presentations, copy, decks, web pages, and any client-facing or feed-facing deliverable.

QC is not a stage you can skip when busy. It is the last thing that stands between our work and our reputation. Speed never overrides this gate.

2. The Trigger — When the Full Chain Is Mandatory

RULE OF THUMB — the full QC chain is **MANDATORY**, without exception or skipping, for:

- Any project above \$3,000, and

- **All retainer work** — any and all retainer work is documented and passes the chain **until further notice**.

Work below \$3,000 that is not retainer still follows normal QC discipline (SOP 01 / SOP 02 and the 1% Doubt Rule), but is not bound to the full mandatory chain below.

3. The Mandatory Review Chain

Qualifying work passes through the following individuals **in this exact order**. No stage is skipped. Each name lists its **fallback** for when the primary reviewer is unavailable.

1 **Sama** (fallback: **Shams**)

2 **Karim** (fallback: **Biker**)

3 **Nabil** (final sign-off)

Stage	Primary	Fallback
1	Sama	Shams
2	Karim	Biker
3	Nabil	Reem (visual consultant)

Layering for caution — do NOT skip Karim. In some cases Biker is automatically involved in the work. When that happens, **Karim is still not skipped**. We layer the reviews rather than collapse them: Biker's involvement is additional caution, never a reason to remove a stage.

No skipping, no exceptions. A reviewer being “sure it's fine” is not grounds to bypass a stage. If a primary is unavailable, the fallback steps in; the chain never shortens.

AI-Technical Work — Layered Review

Anything that is AI “**technical**” in nature (model/pipeline work, automation logic, technically demanding AI builds) carries its own layered review on top of the general gate:

1 **Joe** (Head of AI) reviews the technical execution.

2 Karim reviews for craft and visual standard.

3 Nabil gives final sign-off.

Exception — micro projects. The full Joe → Karim → Nabil layering is waived **only** for micro projects. Everything beyond a micro project runs the full chain.

4. Tier 1 Projects — Mandatory Personal Sign-Off

RED LINE — Tier 1 work does not reach the client without Nabil's personal approval.

Under **no circumstance**, except **critical impossibility**, does a Tier 1 draft or visual of any sort go to the client without **Nabil's personal approval and sign-off**.

The fallback ladder applies **only** when Nabil is genuinely unreachable under critical urgency and **all reasonable measures to reach him have already been exhausted**:

1 Nabil's personal sign-off. The default and required gate for every Tier 1 visual/draft.

2 Critical urgency & Nabil unreachable (all measures taken) → attempt to reach our visual consultant Reem for sign-off.

3 Both Nabil and Reem unreachable → conduct a **direct, real-time live critique** where Karim + Biker + Sama (all three) evaluate and actively counter each other's opinions to push for the maximum quality standard based on everything the team has learnt so far.

The 3-way live critique is a last resort, not a convenience. It is only valid after Nabil and Reem have both genuinely failed to be reached under documented critical urgency. It must be live and simultaneous (all three present), with opinions challenged, not merely rubber-stamped.

4.1 Mandatory Tier 1 Checkpoints (e.g., TVCs)

For Tier 1 clients (such as TVCs), Nabil's review is required at these specific points — each one before the client ever sees the work:

1 Statics presentation — before video production begins, and **definitely before the client sees the statics for the first time**.

2 First timeline draft.

3 First cut.

4.2 Social Content — Advance Review

Nabil sees the social ideas, references, and plan in advance, presented in a **plug-and-play manner** — ready to read, react to, and approve without assembly work on his end.

4.3 How to Acquire Nabil's Review — Two Required Steps

1 **Prepare a Loom — NO LINKS, NO DOCS.** The team prepares an **English** video with a **clear explanation of narrative, flow, intent, nuances**, and any information they want Nabil to note. If a Loom is technically insufficient, **Miro boards are acceptable. Avoid Excel sheets or any document that requires excessive navigation.**

2 **Book a Calendly meeting** (via the assigned **QC-feedback Calendly link**) **only** when the requesting party is certain there will be direct feedback, thought-sharing, and back-and-forth. All thoughts and information are **planned and prepared in advance**, with every effort made to ensure **not one unnecessary minute** is wasted.

4.4 Scheduling Discipline — Book Nabil's Time in Advance

Account for the time it takes to schedule feedback with Nabil. Do NOT attempt same-day booking and then complain that Nabil caused timeline delays. You are required to book his time **in advance**, with absolute caution and consideration, so the flow is never hindered by forgetfulness or by failing to time your work and feedback windows accurately.

4.5 If Scheduling Becomes Genuinely Difficult

If all protocols above are followed accurately and scheduling is still difficult for some reason, arrangements will be made — or Nabil's milestone may be **skipped with his explicit consent**. In those contexts, **Biker, Reem, and/or Karim** are potential fallbacks.

Exception — no skipping for personal brands / AI creators. Social media content for **personal brands or AI creators** is excluded from this skip allowance.

5. The QC Checklist

Every reviewer checks, at minimum, the following before passing the work forward:

 **Grammar**
Copy, captions, on-screen text and titles are clean — spelling, grammar, and punctuation correct.

 **Deformities**
No AI/visual deformities — hands, eyes, faces, text, edges, anatomy, and continuity all clean.

 **Excessive HDR**
No over-cooked HDR — tone mapping looks natural, highlights and shadows are not crushed or haloed.

 **Excessive Sepia**
No excessive sepia / colour cast — white balance and grade look intentional, not muddy or yellowed.

 **Character Consistency (all AI content)**
For **all AI content**, any recurring character/persona stays **consistent** — same face, features, styling, and proportions across frames, slides, and episodes. No drift.

 **Anything else**
This list is a floor, not a ceiling — reviewers flag any other defect that weakens the work.

#	Checklist Item	What “pass” looks like
1	Grammar	Zero spelling/grammar/punctuation errors in any visible text.
2	Deformities	No warped hands, faces, eyes, text, edges, or broken continuity.
3	Excessive HDR	Natural dynamic range; no halos, no crushed or blown areas.
4	Excessive Sepia	Clean, intentional colour grade; no unwanted yellow/brown cast.
5	Character Consistency (all AI content)	Recurring characters stay identical across frames/posts; no facial or styling drift.

 **This is the baseline checklist.** Additional self-evaluating QC materials will be provided as part of the **training hub**, so each person can pre-check their own work against the full standard before it enters the review chain.

6. How a Pass Is Recorded

Rule	Detail
Documented	Each stage's pass is logged in Slack/CRM against the project. An undocumented “verbal OK” does not count as a QC pass.

Retainer work	All retainer work is documented and routed through this chain until further notice.
----------------------	---

1% Doubt Rule	Even 1% doubt about quality or accuracy at any stage → escalate to Nabil before release (mirrors SOP 01).
----------------------	--
