

IKLIPSE RESET · STANDARD OPERATING PROCEDURE

SOP 10 — Team Communication, Daily Updates & Meetings

How the team aligns every day, what each person reports, and the sacred meeting rhythm.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 09 (QC & the AI-technical review chain), SOP 11 (Time Adherence, Calendars & Meeting Respect), and the Automation & Centralized System spec (which defines how the reminders below are automated).

1. Daily Individual Update (Every Team Member)

Every single team member provides a daily update of their intended tasks for the day. No exceptions, no roles excluded.

The daily update is **synthesized from all sources of data the person has received** — not just one place:

PROJECT MANAGEMENT

Tasks, tickets, and deadlines assigned in the PM tool / CRM.

TEAM CHATS

Instructions and asks given inside Slack (and any sanctioned channel). Nothing gets dropped because it "was only said in chat."

What each daily update must contain

- 1 **Intended tasks for the day**, extracted from **all** data sources above.
- 2 Any **concerns or flags** the person foresees.

- 3 Any **specifics that must be raised in advance** — blockers, dependencies, questions, or risks — surfaced early, not after they bite.

Raise it in advance. The point of the daily update is to surface problems **before** they cost time or quality — not to narrate work after the fact.

Where & How the Daily Checklist Is Posted

The daily checklist is placed in **TWO** places:

- The **appropriate instructed slot within Slack**, and
- The **designated project management system**,

following the exact format provided by your manager.

Format matters — it feeds automation. Failing to follow the provided format may **hinder the automation**, and in that case the update will be **assumed NOT done**. Right content in the wrong format does not count.

Detailed Daily Report — Every Single Day

Beyond the intended-task list, every team member files a **detailed daily report, every single day**, covering all of the following:

#	Field	What to report
1	Completed items	What was actually finished today.
2	% completion on incomplete items	For each unfinished task, an honest percentage toward done.
3	% compliance with timelines	What is on track, what is late or might be late — raise the flag in advance with very good reasons.
4	Where help is needed	Blockers, dependencies, or support required from others.
5	Questions	Anything that needs an answer to keep moving.
6	Learnings of the day	A list of what was learnt today (skills, insights, mistakes turned into lessons).
7	Priorities for tomorrow (recommended)	The top intended focus for the next day, to pre-load the morning meeting.

 **KPI IMPACT.** Failing to populate these fields has a **significant impact on KPI scores** (applied per SOP 08). The report is mandatory, not optional.

[VERIFY] I added two recommended fields (Priorities for tomorrow, Risks & flags) on top of your six. Tell me to keep, drop, or adjust either.

2. The Daily Meeting

A daily meeting is held every single day, at day start — no exception.

This is the moment the daily individual updates come together: alignment, flags, and priorities for the day are confirmed as a team before work begins.

3. The Weekly Team Meeting

Attribute	Rule
Who	Full team, including Fawzy . Everyone attends.
When	Beginning of the week , scheduled at the absolute top priority on Nabil's calendar.
Nabil's presence	Necessary for the first period as the new rhythm beds in.
Directed by	Biker runs/directs the call.
Length	40 minutes sharp. Start on time, end on time.

4. Meeting Logistics & Conduct (Daily & Weekly)

Both the daily and weekly meetings run under the same logistics and conduct rules:

Rule	Detail
Booking	Booked through Sameh , with Nabil invited but NOT the host .
Recording	All calls are recorded (and filed per SOP 11).
Agenda	The agenda is shared in advance — no one walks in cold.

Preparation	Every team member prepares any and all points in advance. The meeting is for alignment, not for figuring out what you wanted to say.
Extension buffer	A 20-minute buffer is held after the meeting in case a necessary extension is needed when there is genuinely more to cover.

Absolutely no wastage of time. No small talk, no wasteful communication. Every minute is used deliberately.

Speaking Order

Turns are followed — starting with **top management**, then continuing in **alphabetical order**, purely for **speed** and to avoid people talking over each other.

Presence & Connection — Non-Negotiable

All cameras ON — without exception. Mics and internet stability are non-negotiable. Show up present, visible, and technically ready. Connection problems are an individual's responsibility to solve in advance, not a meeting-time excuse.

5. Nabil's Time Is Holy

RED LINE — treat Nabil's time as holy. Everyone's time is valuable. But moving forward, **how Nabil's time is treated is the single most critical benchmark** for time discipline at Iklipse. He will be conducting far too many things to spend time — even on a minor scale — unless it is genuinely productive.

Violation	Consequence
Missing a call scheduled with Nabil, without notice	3 strikes = termination.
Being late for a call Nabil is on	More than 3 strikes = possible termination.
Altering calls due to a failure of scheduling	KPI reduction.
Scheduling then rescheduling for non-critical reasons	KPI reduction.
Booking a slot longer than required just to lock up more of his time	KPI reduction.

If Nabil dials you, answer immediately. Unless you are on a **client call**, you are expected to **answer immediately — even if you are on another team call**. A client call is the only thing that takes precedence. The **same expectation applies to his messages** (elaborated in the other documents).

You are given the tools to get this right. The team is provided multiple options and links for different purposes (QC feedback, scheduling, etc.). There is no excuse for mishandling his time.

This is a red line on all levels. Any form of disrespect toward the time offered — in any shape — will result in **immediate formal procedural actions, without hesitation**.

6. Sacred Meetings — Non-Negotiable Protection

The daily meeting and the weekly team meeting are **SACRED**. Do not double-schedule any other meeting on top of these recurring calls.

The only grounds to reschedule are a **critical life-or-death emergency** or a **client that will literally collapse** without it. Nothing else qualifies — not convenience, not a "quick" external call, not a routine client request.

7. Layered Reviews & Feedback (Cross-Reference)

AI-“technical” work follows the layered review chain in SOP 09: Joe → Karim → Nabil, unless the project is a **micro project**. Feedback is layered internally rather than collapsed — see SOP 09 for the full QC gate and Tier 1 sign-off rules.

8. Automating the Reminders

Reminder automation for the daily updates, the daily meeting, and the weekly meeting is to be broken down and specified in the **Automation & Centralized System documentation**. This SOP defines the ritual; the automation doc defines the triggers, nudges, and escalation timing.
