SOP 16 — Finance, Invoicing & Data Security

Invoice traceability, salary delay mechanics, and the secure custody of client credentials and ad accounts.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 15 (Newsletter & Email Automation) and SOP 18 (Disciplinary & Exit Protocol).

1. Invoicing & Traceability

Every invoice raised must be fully traceable through the centralized system. This ensures accurate financial tracking and feeds into other company systems.

Integration with Newsletter: The invoice database directly feeds the "everyone ever invoiced" list for the continuous email automation system (SOP 15). Accurate invoicing ensures our lead and client lists remain comprehensive.

2. Salary Timing & Exit Buffer

As detailed in SOP 18, all salaries are subject to the **10-Day Salary Delay System**. Salaries are paid 10 days late (e.g., July salaries are released on the 10th of August). This held amount functions as an exit buffer to protect the company against zero-notice exits.

3. Data & Credential Security

Given our media buying operations and access to sensitive client platforms, strict custody of credentials is required.

Custody Rules

Asset Type	Authorized Custodians	Rule
Client Logins & Passwords	Top Management, Lead Media Buyer	Must be stored in a secure, centralized password manager. Never share plain-text passwords in Slack or WhatsApp.
Ad Accounts & Business Managers	Lead Media Buyer (Fousey), Top Management	Access is granted via proper role-based permissions (e.g., Meta Business Manager), never by sharing personal login credentials.
Internal System Credentials	Top Management, IT/Admin (Abdo)	Access is revoked immediately upon an employee's exit or notice period initiation, as directed by management.

Security Breach Consequence: Mishandling client credentials, sharing passwords insecurely, or failing to revoke access appropriately is a severe security breach and subject to immediate disciplinary action.
