SOP 18 — Disciplinary, Warnings & Exit Protocol

Coaching calls, strike accumulation, termination conditions, notice periods, and the 10-day exit buffer.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 08 (KPI Scoring) and SOP 10 (Nabil's Time Is Holy).

1. Coaching Calls & Warnings

A **coaching call** is a short, structured corrective conversation, not a punishment and not a casual chat. Its purpose is to sit down with whoever was involved in a failure, understand exactly why it happened, correct the behavior, and document that the correction took place. We avoid collective punishment where possible, so only those genuinely involved in the failure attend. The call is logged (per SOP 11), and a coaching call **displaces your logout time by the exact length of the call** — if a coaching call runs 30 minutes, you owe those 30 minutes back that same day. This is non-negotiable, because the time lost is time the rest of the team did not lose.

What triggers a coaching call

In general, a coaching call is triggered by breaking **any** of the rules we have been building across these SOPs. It is the first formal response to a broken rule, before strikes or termination come into play. Concrete examples include:

- **Time & attendance:** Logging in late, failing the button check-in, exceeding the 1-hour daily break, or not hitting the 9 productive hours without a valid, pre-flagged reason (SOP 13).
- **Daily reporting:** Missing the daily checklist, putting it in the wrong slot or wrong format (so the automation treats it as not done), or submitting a thin, low-effort daily report (SOP 10).

- **Meetings:** Arriving unprepared, no agenda points ready, camera off, unstable mic/internet, or treating a meeting as small talk (SOP 10).
- **SOP & protocol:** Skipping the QC chain, bypassing the ticketing/escalation flow, or ignoring a documented workflow (SOP 09, SOP 12).
- **Communication:** Failing to respond elaborately, slow or no response to messages, or introverted/minimal communication where proactive communication was required.
- **Quality:** Sending work forward with avoidable defects the checklist should have caught (grammar, deformities, excessive HDR/sepia, character inconsistency).
- **Timelines:** Letting a task slip toward a buffer breach without raising the flag in advance with a good reason.

The principle is simple: if a rule exists in these SOPs and you break it, expect a coaching call to understand and correct it. Repeatedly causing them is what escalates into warnings and, ultimately, termination.

Strike Accumulation: Causing **more than 2 coaching calls in a single month** (for any individual) results in a formal warning. If that pattern repeats in **2 further months**, the individual is subject to termination at management discretion.

2. Termination Conditions

The company reserves the right to terminate employment. The required notice period depends on the severity of the offense.

Immediate No-Notice Termination

The following offenses entitle the company to terminate employment immediately, without notice:

- **Red Zone Breaches:** Accumulating 4 strikes in the Red Zone (failing the team-visible buffer).
- **Black Zone Breaches:** A second offense of breaching an actual client deadline (Black Zone). The first offense is a warning; the second is immediate termination.
- **Disrespecting Nabil's Time:** Missing a scheduled call with Nabil without notice (3 strikes), or being late for calls Nabil is on (more than 3 strikes).
- Aggressive breach of contract, extreme misconduct, or failure to deliver.

3. Notice Periods & Exit Protocol

For standard separations, the following notice periods apply:

Initiator	Phase	Required Notice
-----------	-------	-----------------

Employee	Any time	2 Months
Company	Testing Phase (First 3–6 months)	2 Weeks (assuming no critical issue/misconduct)

The 10-Day Salary Delay System (Exit Buffer)

This is one of the most important mechanics to understand clearly, so here is exactly how it works and why it exists.

What it is: Your salary for a given calendar month is not paid on the last day of that month. It is paid **10 days into the following month**. For example, the salary you earn during the month of July is released on **August 10th**; the salary you earn in August is released on September 10th, and so on. This 10-day shift is permanent and applies every month, not just once.

Why it exists: At any moment, the company is effectively holding roughly 10 days of already-earned pay for each person. That held amount is the **"exit buffer."** Its sole purpose is to protect the company and the clients against someone disappearing without notice or behaving destructively on the way out (e.g., walking off mid-project, leaking access, or abandoning a client deadline). It is not a deduction, a fine, or money you lose by default — it is **your money, simply held on a 10-day delay** for the duration of your engagement.

Scenario	What happens to the held 10 days
You stay employed	Always paid — it simply rolls forward every month on the 10th.
You exit correctly (full 2-month notice served, clean handover)	Paid in full on your final exit date, alongside any remaining balance owed.
You exit abruptly (no notice / abandon duties / misconduct)	Forfeited. You lose those ~10 working days of pay as the cost of the disruption caused.

Bottom line: Follow the proper exit protocol and serve your notice, and every penny of the buffer is paid to you. Vanish or breach on the way out, and the buffer is forfeited. The choice, and the consequence, is entirely in your hands.
