PROCEDURE

SOP 19 — Crisis & Timeline-Reset Protocol

The one-time aggressive timeline reset, client communication rules, and internal timeline ownership.

TIER 1 · EMPLOYEE-FACING

Read together with: SOP 01 (Client Work) for standard delivery protocols.

1. The Aggressive Timeline Reset (One-Time)

To immediately relieve timeline stress and give the team room to clear their minds and deliver with quality, quantity, and time efficiency, the company may execute a massive, one-time timeline reset.

"Never Again" Rule: If executed, this involves contacting active clients, issuing a formal apology, and requesting massive one-time extensions. This is a one-time event to save the situation. It will **never** be repeated.

Exceptions

The following clients are strictly excluded from this reset due to existing critical delays. **Do NOT** delay these clients further:

- Reflect
- Hungry Minds

2. Buffer & Timeline Ownership Workflow

For all new clients and projects, timeline buffers must be strictly calculated and owned to prevent the need for future extensions.

1 Implementer Suggestion: The team members executing the work provide their timeline suggestions.

2 Manager Recommendation: The direct manager (e.g., Sama) reviews and makes the official recommendation.

3 Buffer Addition: A sharp minimum **+30% team-announced buffer** is added, followed by another **+30% private management buffer**.

4 Final Approval: Biker (Head of Operations) approves the final timelines.

Responsibility & Accountability

Biker and the recommending managers jointly hold full responsibility to ensure delivery WITHOUT failure. If a timeline is miscalculated, the team must **NOT** ask clients for further extensions. Instead, Biker handles it internally, which may involve requiring the team to pull all-nighters to meet the committed deadline.
